

VS Compact SLIM

Small but powerful – the VS Compact SLIM connection module provides more protection and packing density

Convincing cabling solutions

Introduction
Product overview

VS Compact SLIM 10-pair Connection Module

Added value for telecommunications – in particular stands for higher packing density in distribution systems, greater protection and security for connections as well as modular and convenient installation. The new SLIM 10-pair connection module from R&M provides you with this added value. This connection module supplements the VS Compact distribution system from R&M. Use the compact SLIM connection module where high packing density is desired in the existing infrastructure. The SLIM connection module provides you with additional advantages...

Slim and Easy

The SLIM connection module is based on the technology of the well-proven VS Compact distribution system. The advantages for you are: the SLIM connection module can be combined with the regular VS Compact connection modules; you are already familiar with the mounting holder and you install the connection module with the usual steps; you use the same wiring tool as previously.

With the arrangement of the contacts - cable side in the back and transfer side in the front – R&M achieves a grid size of 10 mm, which corresponds to a double packing density. The SLIM connection module features full Category 5e performance. The cover provides optimal safety. If required, the connection module can be protected with gel even more effectively against environmental effects.

Compact – Saves Space

Double packing density compared to the ordinary connection module. This, in fact, was our development goal. The SLIM connection module meets this condition thanks to its extremely small design with a grid size of only 10 mm.

- Flexibility
- Protection

@ R&M

Compatibility – Modular Design

The SLIM connection module fits seamlessly to the 10-pair VS Compact connection module. The mounting profiles are identical, which allows various combinations. You can continue to use the usual wiring tool.

Gel Filling – Flexible Protection

You decide on site whether the protection against environmental effects such as dirt and dampness must be increased. The handy gel set from R&M is exactly what you need for the sealing of the connection module. In a few steps, you fill the cable cover and front cover with the long lasting soft polymer.

Data transfer - Cat. 5e

Telecommunications networks must cope with every challenge of data transfer. You incorporate the appropriate performance in the distributor with the category 5e capable SLIM connection module. R&M will expand the SLIM product line with patch cord solutions. For you, this represents more flexibility.
